

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A television (TV) having a language selection function ~~in an apparatus capable of contacting to an internet site~~, comprising:

a control unit ~~for receiving~~ configured to receive character information in a first language, to send the character information to a translation site through a network interface if it is determined that the first language does not correspond to a selected language, and to receive the translated into a user selection language character information corresponding to the selected language; and

a video processing unit ~~for displaying~~ configured to receive the received translated character information and to display the translated character information on a screen.

2. (Currently Amended) The TV having the language selection function according to claim 1, ~~wherein the TV having the language selection function further comprises~~ comprising an audio processing unit ~~for processing~~ configured to process audio information synchronized with the translated character information displayed on the screen.

3. (Currently Amended) The TV having the language selection function according to claim 1, wherein the TV having the language selection function further ~~comprises~~ comprising a storing unit ~~for storing~~ configured to store contact information ~~of~~ associated with a translation relay site.

4. (Currently Amended) The TV having the language selection function according to claim 3, wherein the contact information ~~is~~ comprises a URL (Uniform Resource Locator).

5. (Currently Amended) The TV having the language selection function according to claim 4, wherein the control unit is configured to contact ~~to~~ a translation relay site server by using a URL ~~of~~ associated with the translation relay site, and ~~receives~~ to receive the translated character information from the translation relay site server.

6. (Currently Amended) The TV having the language selection function according to claim 5, wherein the control unit ~~contacts~~ is configured to contact the translation relay site server through a network interface unit.

7. (Currently Amended) The TV having the language selection function according to claim 6, wherein the translation relay site server ~~receives~~ is configured to receive character

information and language information transmitted from the control unit, ~~translates to~~ translate the transmitted character information into a language corresponding to the language information, and ~~transmits it to~~ transmit the translated information to the control unit.

8. (Original) The TV having the language selection function according to claim 7, wherein the language corresponding to the language information is a language selected by a user.

9. (Currently Amended) The TV having the language selection function according to claim 6, wherein the translation relay site server is ~~provided the~~ configured to receive translated character information from the translation site ~~corresponding to~~ in accordance with the selected language ~~selected by the user~~, and ~~transmits it to~~ transmit the translated character information to the control unit.

10. (Currently Amended) The TV having the language selection function according to claim 9, wherein the translation site is ~~inputted~~ configured to receive the character information to be translated from the translation relay site server, ~~translates it to~~ translate the character information into the selected language ~~selected by the user~~, and ~~provides it to~~ provide the translated character information to the translation relay site server.

11. (Currently Amended) The TV having the language selection function according to claim 1, wherein the control unit ~~embodies~~ is configured to generate an OSD (On Screen Display) ~~about~~ based on the received-translated character information, and ~~provides it to provide~~ the translated character information to the video processing unit in order to display the ~~embodied~~ OSD on a ~~the~~ screen.

12. (Currently Amended) A TV having a language selection function, comprising:
a network interface unit ~~for contacting~~ configured to contact a translation site;
a storing unit ~~for storing~~ configured to store contact information ~~of~~ for at least one translation sites corresponding to various site which corresponds to a plurality of languages and an operation program related to translation;

a control unit ~~for contacting~~ configured to contact a translation site corresponding to a ~~user selection~~ selected language by using based on the contact information ~~of the translation site corresponding to the various languages through the network interface, transmitting~~ stored in the storing unit, to transmit character information to be translated in accordance with the operation program ~~related to translation, and receiving~~ stored in the storing unit, and to receive translated character information from the translation site; and

a video processing unit ~~for displaying~~ configured to display the ~~received-translated~~ character information on a screen.

13. (Currently Amended) The TV having the language selection function according to claim 12, ~~wherein the TV having the language selection function further comprises~~ comprising an audio processing unit for outputting configured to output audio information synchronized with the translated character information.

14. (Currently Amended) The TV having the language selection function according to claim 12, wherein the control unit ~~embodies~~ is configured to generate an OSD (On Screen Display) about the received character information, and ~~provides to provide the embodies~~ OSD to the video processing unit in order to display ~~it the~~ on a OSD the screen.

15. (Currently Amended) The TV having the language selection function according to claim 12, ~~wherein the control unit contacts~~ is configured to contact a translation relay site server ~~by using contact information of a translation relay site, and receives the~~ and to receive translated character information from the translation relay site server.

16. (Currently Amended) The TV having the language selection function according to claim 15, wherein the translation relay site server ~~receives~~ is configured to receive character information to be translated and language information from the control unit, ~~translates to~~ translate the character information ~~to be translated~~ into a language corresponding to the

language information, and ~~transmits it to~~ transmit the translated character information to the control unit.

17. (Currently Amended) The TV having the language selection function according to claim 16, wherein the translation relay site server is ~~provided the~~ configured to receive translated character information from the translation site, and ~~transmits it to~~ transmit the translated character information to the control unit.

18. (Currently Amended) A control method ~~[[of]]~~ for a TV having a language selection function, comprising:

receiving character information ~~translated into~~ in a first language and contacting an appropriate translation site through a network interface if it is determined that the character information does not correspond to a selected language ~~selected by a user~~; and

displaying the ~~received~~ translated character information on a screen.

19. (Currently Amended) The control method of the TV having the language selection function according to claim 18, ~~wherein the receiving process for receiving the translated character information comprises the steps of: judging whether~~ further comprising:

determining if a language of character information included in a ~~broadcast~~-signal corresponds to ~~a~~ the selected language ~~selected by a user~~;

transmitting the character information included in the ~~broadcast~~-signal to a translation relay site server ~~when if~~ the language of the character information included in the ~~broadcast~~-signal is different from the selected language ~~selected by the user~~; and

transmitting the ~~transmitted~~ character information from the translation relay site server to the ~~a~~ translation site ~~in order to translate it~~, translating the character information into the selected language ~~selected by the user~~ and ~~receiving~~, transmitting the translated character information ~~translated into the language selected by the user from the translation site~~, to the translation relay site server, and receiving the translated character information.

20. (Currently Amended) The control method of the TV having the language selection function according to claim 18, ~~wherein the receiving process for receiving the translated character information comprises the steps of~~ further comprising:

contacting ~~to a translation site corresponding to~~ based on language information ~~in and previously stored~~ contact information ~~of~~ related to the plurality of translation sites ~~stored in advance~~;

requesting translation of character information by transmitting the character information to the translation site; and

receiving the translated character information from the translation site.

21. (Currently Amended) The control method of the TV having the language selection function according to claim 20, wherein the language information ~~is comprises~~ user language information ~~for defining kinds of~~ which defines the selected language selected by a user and character language information ~~for defining kinds of~~ which defines a language of character information included in a ~~broadcast~~ signal.

22. (Currently Amended) The control method for the TV having the language selection function according to claim 21, wherein the previously stored translation site contact information ~~stored in advance~~ is updated periodically.

23. (Currently Amended) A control method ~~of for~~ for a TV having a language selection function, comprising: ~~judging whether~~

determining if a language of character information included in a ~~broadcast~~ signal corresponds to a ~~user selection~~ selected language;

requesting translation of the character information by contacting ~~to an internet~~ translation site corresponding to the ~~user selection~~ selected language ~~among preset internet~~ by selecting an appropriate translation site from a plurality of translation sites and transmitting the

character information ~~when to the selected translation site if~~ the language of the character information included in the ~~broadcast~~ signal is different from the ~~user selection~~ selected language; and

~~displaying the translated character information on a screen and outputting the audio information by receiving the translated character information from the translation site and audio information synchronized with it from the internet translation site~~ displaying the translated character information on a screen substantially in synch with corresponding audio information.

24. (New) The TV having a language selection function according to claim 1, wherein the video processing unit is configured to receive the translated character information on the screen in synch with at least one other component of a corresponding television signal.

25. (New) The TV having a language selection function according to claim 24, wherein the television signal comprises at least audio information, video information, and the character information.

26. (New) The control method of a TV having the language selection function according to claim 2, wherein the audio information and the translated character information displayed on the screen remain continuously synchronized.

27. (New) The control method of a TV having a language selection function according to claim 18, wherein the translated character information is displayed in synch with at least one other component of a corresponding television signal.

28. (New) The control method of a TV having a language selection function according to claim 27, wherein the television signal comprises at least audio information, video information, and the character information.

29. (New) The control method of a TV having a language selection function according to claim 18, wherein the translated character information is displayed in synch with corresponding audio information.

30. (New) The control method of a TV having a language selection function according to claim 19, wherein the audio information and the translated character information displayed on the screen remain continuously synchronized.

31. (New) The control method of a TV having a language selection function according to claim 23, wherein the signal comprises a broadcast signal.

Serial No. 09/841,007

Docket No. P-0220

Amdt. Dated April 12, 2005

Reply to Office Action of January 14, 2005

32. (New) The TV having a language selection function according to claim 1, wherein the translation site is selected from a plurality of previously stored translation sites.

33. (New) The control method of a TV having a language selection function according to claim 18, wherein the translation site is selected from a plurality of previously stored translation sites.
